

Name: Prof. Dr. Jan Minar

Nationality: Slovak, German

Institution: University of West Bohemia (UWB), New Technologies
Research Center (NTC), Pilsen, Czech Republic

Activities

I facilitated the establishment of the Toyama Liaison Office in Pilsen, Czech Republic, envisioned as a cornerstone for fostering international exchange between the University of Toyama (UT) and the University of West Bohemia (UWB). This office is anticipated to be instrumental in enhancing student exchanges and collaborative research initiatives. In a brief period, I have successfully bridged communication between diverse faculties at UWB and UT. Looking ahead, we are planning the exchange of several students for the upcoming year, particularly from the Physics Department, the New Technologies Research Centre (NTC), and the Ladislav Sutnar Faculty of Design and Art.

co-authored with researchers of UT

Over the past few years, I have been actively involved in facilitating student exchanges between the University of West Bohemia (UWB) and the University of Toyama (UT). Unfortunately, as of now, I have not co-authored any thesis with researchers from UT. However, I am currently collaborating with Associate Professor Keisuke Hatada from the School of Science at UT to develop a range of topics for future PhD projects. These initiatives are planned to be pursued during my forthcoming stay at UT this year.
